Introduction

Lesson Overview

In this lesson I am going to describe your course. First a discussion of the objectives of the course, and the specific learning outcomes. Next we will move to Temenos Payments Overview.

| Lesson Overview

Your Course » Objective and Learning Outcomes

This course will allow you to Describe Overview of Temenos Payments In particular you will be able to: Discuss about the Temenos Payments Solution and its key Benefits Learn Payment Order and Payments hub Use standard enquiries

| Your Course » Objective and Learning Outcomes

This course will allow you to:

- Describe Overview of Temenos Payments

In particular you will be able to:

- Discuss about the Temenos Payments Solution and its key Benefits
- Learn Payment Order and Payments hub
- Use standard enquiries

Your Course » Timetable

Here's the timetable. We've just started on the Introduction lesson. Following this we'll cover Temenos Payments .

| Your Course » Timetable

Payments Overview

The Payments module is used to move funds between accounts. Movements can be between customer accounts; local or International. A payment can be made in the form of cheques, wire transfer or SWIFT, Demand Draft, Standing order, clearing etc .

| Payments Overview

- Banks maintain accounts for their own funds and for their customers funds
- Funds movement can be done to customer accounts within bank or even to other local or international banks
- All types of payments are handled using Temenos Payments like SWIFT, Cheques, Demand Draft, STO, Local Transfers etc..

Payments Overview » Key Solution Offerings

Temenos payments provides a range of optimized solutions covering the payments processing lifecycle. Our key payment products are Payments Order Management, Payments Hub and , Payments Repair each of which can be implemented by themselves or else combined to provide seamless integration.

| Payments Overview » Key Solution Offerings

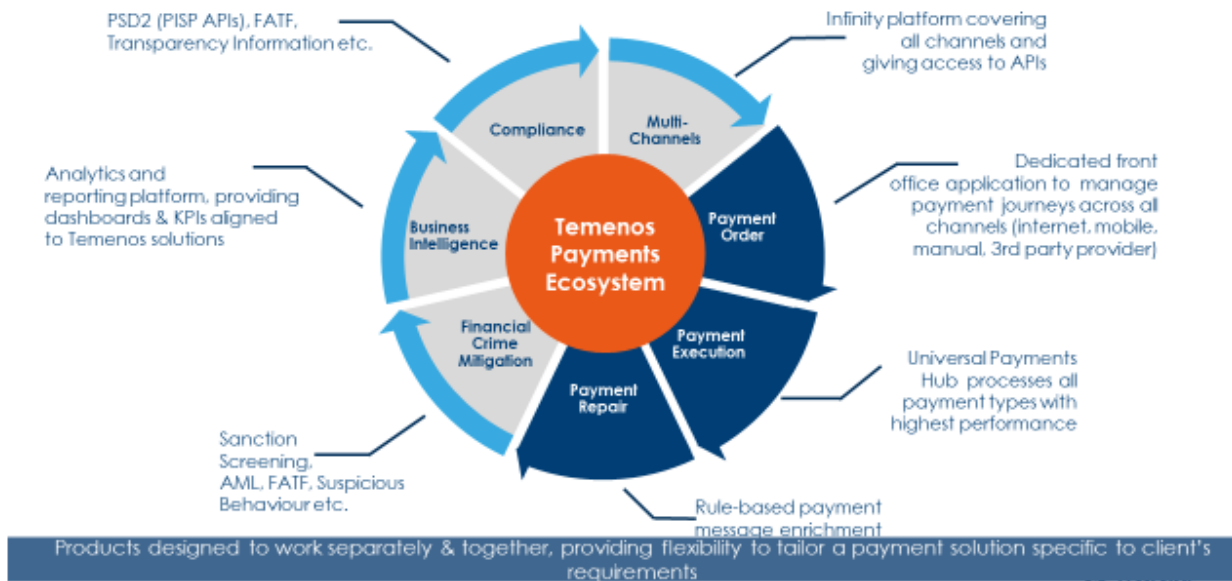

©2022 Temenos Headquarters SA - all rights reserved.

Payments Overview » Payment Dependencies

Temenos Payments is fully integrated with several other products of Temenos in-house too. For example Compliance through PSD2 APIs and other Banking APIs Infinity for Retail, Business banking , Wealth for managing payments initiated from Channels like Internet, Mobile etc Analytics and Business intelligence for reports and Dashboards Financial Crime and Mitigation for sanction screening , Suspicious Behavior

| Payments Overview » Payment Dependencies

Payments Overview » Key benefits

Temenos Payment system is a flexible framework that empowers banks to provide seamless payment across globe with regulatory obligations. Temenos Payment system enhances the STP rate there by reduces the cost and time. This flexible framework can be used to create different payment mechanism at ease.

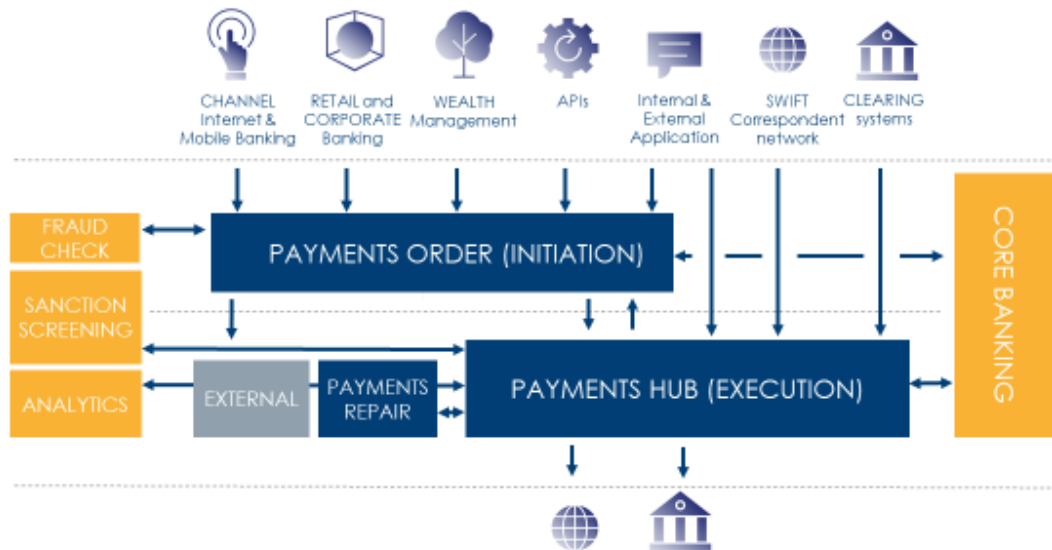

| Payments Overview » Key benefits

Payments Overview » Payment Order Management

Temenos Payment order management solution provides comprehensive front office capabilities to enhance customer payment journeys on end-user channels like mobile, online banking and any third-party applications. This highly flexible application supports business/scheme rule validations, order submission and tracking using APIs

| Payments Overview » Payment Order Management

TEMENOS
Learning Community

Payments Overview » Payment Initiation

The Payment initiated by customer in the front end through various channels like Infinity or by any Core banking application or Channels are passed to the Payment Order module. The payments can be executed through the payment systems namely Funds Transfer or through Temenos Payment Hub or an external payment solution.

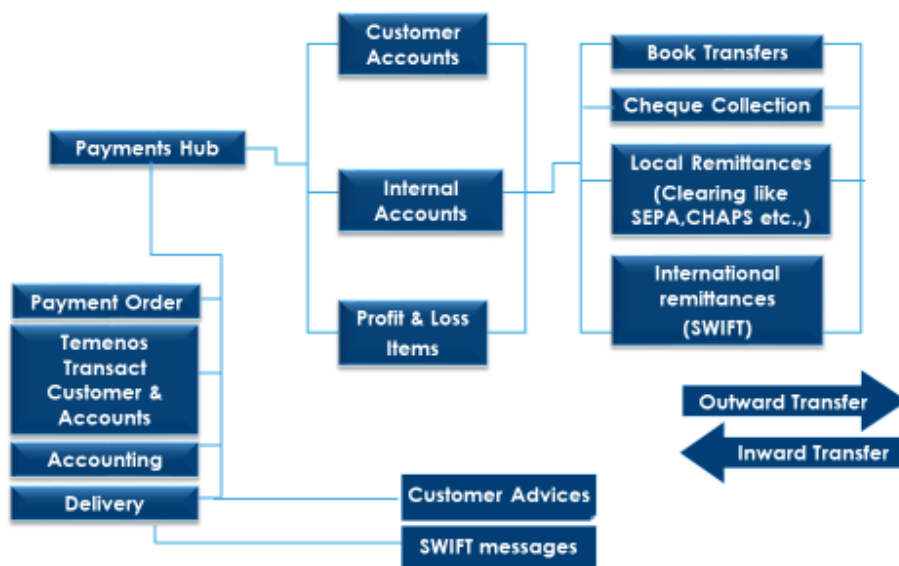

| Payments Overview » Payment Initiation

Payments Overview » Payments Hub

Temenos Payments Hub (TPH) is a universal payments hub solution. It has a Universal Payments Process which enables centralization of all payment operations under a central infrastructure to support multiple payment formats and global payment mechanisms. The payment hub solution provides banks with a single solution to configure their payment processing for all customers, specifying different processing for high and low care customers by parameterization without requiring any software changes. Internally, payments can be made to or from a Customer's account or an internal account. It could involve transferring money from one customer account to another customer account. Some of the external types of payment include Cheques, Mail Payment, Banker's Draft, Clearing House Payments, International payments via Correspondents etc. Instructions can be fed manually or from other electronic communication systems like SWIFT. It is linked to all types of outputs whether paper or wire through the Delivery setup in Temenos Transact. If there is an interface with SWIFT, then SWIFT message can be generated for Outward Transfers. In respect of incoming SWIFT message it can be received and automated to process the payment. The application is designed to handle all types of currencies, local or foreign and inward or outward payments. On a real time basis, the application raises accounting entries and updates the core limit setup whenever an account is debited or credited.

TEMENOS
Learning Community

Payments Overview » Payment Repair

Our Payments Repair solution markedly improves straight through processing (STP) rates by automatically repairing and enriching messages. This enables payment transactions to be conducted digitally without the need for re-keying or manual interventions. This intelligent tech combined with a unique Temenos Banking community generated knowledge base, which integrates seamlessly into any Payment Repair and operational system. Payment Repair is made up of sophisticated STP management products that can help banks to improve their STP rates. Rules can be initiated from country, regulations etc..

Payments Overview » Payment Repair

Temenos Payments Repair enables customers, to move their money faster by repairing payments automatically without manual intervention. It significantly increases the Straight through (STP) processing rates, especially for complicated high value and cross border payment flows. Assume a payment is initiated with BIC wrongly entered in a different field which doesn't hold the BIC. In this case, the payment will go for a repair. The repair engine facilitate automatic repair of Payments by enriching the BIC field with the given BIC code.

| Payments Overview » Payment Repair

Payments Overview » Financial Crime Mitigation Flow

The Financial Crime Mitigation (FCM) system is designed to filter cross border and or domestic transactions and messages that are subjected to online compliance screening. When a payment is processed or when an onboarding of a customer happens the banks may use screening engine to stop transactions which aid Terrorist financing, illegal activities financing etc.

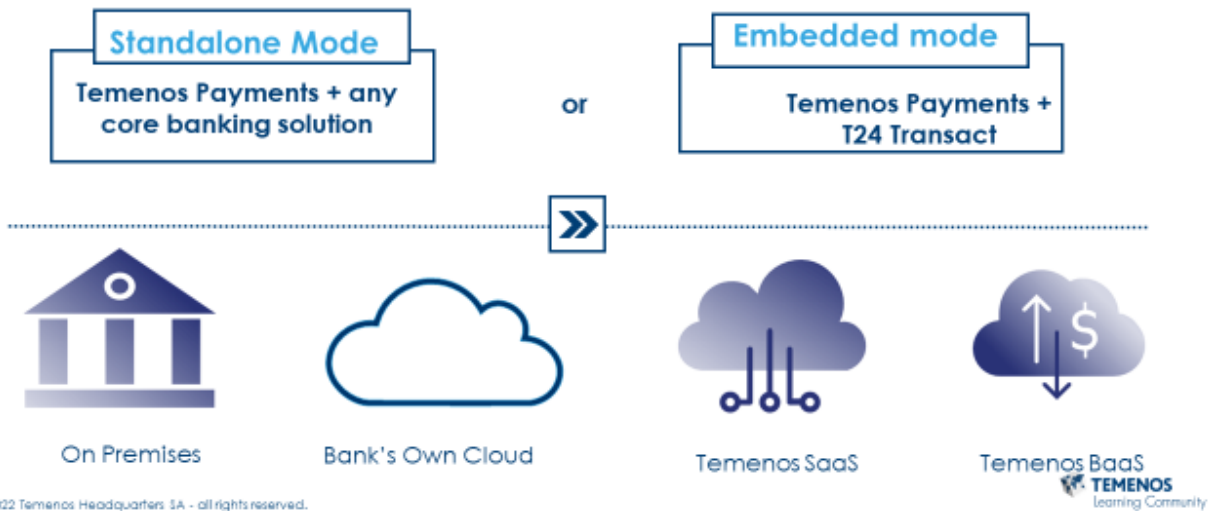

| Payments Overview » Financial Crime Mitigation Flow

Payments Overview » Wide range of deployment options

Temenos Payments can run as on-premise solution, Cloud, SaaS or Banking as a Service depending on Customer's requirements. It can work in Standalone or Embedded Mode . By Embedded, we mean the Payment solutions worth with Transact as Core Banking . By Standalone, we mean it can work with any core banking system based on needs of our customer and business demands

Payments Overview » Wide range of deployment options

Payments Overview » Summary

Payment Hub solution is designed to be implemented to run the enterprise payments operations of any bank, whether they are using banking solution Transact, or any other core banking and/or support systems. Payment Hub solution supports retail, corporate and private wealth's payments businesses, from low value to high volume, from cross border to domestic, from batch to real time, local clearing as well as well as correspondent banking payments. Payment Hub solution enables the user to maximize the STP using using auto repair and data enrichment, rule-based payment orchestration. It also provides full visibility by consolidation of all payment traffic in dash boards. Our Payment Orders management solution provides comprehensive front office capabilities to enhance customer payment journeys on end-user channels like mobile, online banking and any third party applications

| Payments Overview » Summary

Lesson Summary

In this lesson I described the view of the whole course, its specific learning outcomes, objectives and also an introduction to the other lessons of the course which are part of the agenda. Then we looked at the Payments Overview.

| Lesson Summary

Temenos Payments

Lesson Overview

In this lesson we will look at the Payment Order application. Then, we will learn about the Payment Hub and finally we will look at enquires related to payments.

| Lesson Overview

Payment Order

PAYMENT.ORDER application is used to capture all types of electronic/manual transactions for customer and for banks. Its possible to capture account transfer and outgoing transfer requests initiated from the customer and core banking applications. Payment Order application can also be used to initiate draft Payments

| Payment Order

- PAYMENT.ORDER application is used to capture electronic/manual transactions
- The following requests can be captured for customers and for banks using this application.
 - Account Transfer
 - Transfer of Funds between accounts
 - Outgoing Transfer
 - Transfer of funds favoring beneficiary in another bank
 - Drafts
 - Customer can request bank for Draft payment

Payment Order » Account Transfer » Mandatory Details

Debit account identifies the account to be debited for the transaction. Payment Currency defines the currency of the account being debited/credited. Payment Amount identifies the amount to be debited/credited. Debit Value date identifies the date when the debit is to be processed. This date will affect interest calculations within the debit account. This date can be future dated.

| Payment Order » Account Transfer » Mandatory Details

- To capture account transfer user can key in the details by using the version called Payment Order - ACTRF
- Payment Currency
 - Represent the ccy of the transaction
- Payment Amount
 - Represent the amount to process the book transfer
- Debit account number
 - Represent the customer account where the money is debited
- Credit account number
 - Represent the customer account where the money is credited

Payment Order » International Transfer » SWIFT Payments

In Payment module user can handle variety of payments . It can be a SWIFT related payments like Incoming / Out Going payments. The system is integrated with the delivery sub system for generating the delivery messages. System also supports Bulk transaction and these can be in the form of various files which can be upload into the system and processed. For example salary payments made by the corporate to the members of the staff, Corporate action of security transaction like cash dividends for shares / Coupons payments for the Bond to be processed under bulk processing .

| Payment Order » International Transfer » SWIFT Payments

- Under SWIFT it can cater to the requirement of Incoming and Outgoing Messages
- Payment is Integrated with the Delivery sub system
 - It generates all the SWIFT outgoing message
 - It receives all the Incoming message for processing those transaction as a Straight Through Processing

Payment Order » International Transfer Outward Remittances » MT103 Single Customer Credit Transfer

The payment order module can facilitate the processing of funds transfers through Nostro accounts. This transfer can be between customer and the bank. When our customer sends the request to remit the funds for the beneficiary who is holding an account in another bank then outgoing transfer will be sent out to the beneficiary bank to further credit to beneficiary. Our bank will pay the money to the beneficiary account through Nostro accounts. Charges can be set to BEN, OUR or SHA to indicate who is to bear the charges for the transfer. OUR - charges is when all the charges are borne by the ordering customer. BEN - charges is when all the charges are borne by the beneficiary. SHA - charges is shared between the ordering customer and beneficiary.

Payment Order » International Transfer Outward Remittances » MT103 Single Customer Credit Transfer

- Banks maintain Nostro accounts with foreign banks.
 - Facilitate their payments and payments on behalf of their customers.
- A customer can remit funds abroad to credit another beneficiary's account.
- A simple way to look at this is in the illustration below

Payment Order » Outgoing MT103 Swift Message » Mandatory Fields

Payment currency reflects under which currency the transaction needs to be created by the user. Payment amount represents the amount to remit the funds. Debit account number indicates the ordering customer details.

Payment Order » Outgoing MT103 Swift Message » Mandatory Fields

- To capture outgoing transfer user can key in the details by using the version called Payment Order - INATIONAL
- Payment currency
 - Specifies under which currency the transaction needs to be created
- Payment Amount
 - Represent the amount to process the payment
- Debit account
 - Debit account of the client indicates the ordering customer details

Payment Order » Outgoing MT103 Swift Message » Mandatory Fields

When ever any outgoing SWIFT message are sent the ordering customer needs to provide the following information. Beneficiary name , Beneficiary account number to be entered for the transfer of funds IBAN details : Any payment effected through Cross border of EURO region , then the necessity of IBAN becomes an important field while processing the transaction.

Payment Order » Outgoing MT103 Swift Message » Mandatory Fields

- **Beneficiary Name**
 - Indicates the name of the beneficiary to whom the funds have to be applied
- **Beneficiary account number**
 - Indicates the account number of the beneficiary
- **IBAN Details (Mandatory for some countries)**
 - Any payments effected through cross border of EURO region IBAN becomes a mandatory details for processing the transaction
- **Beneficiary Bank Bic**
 - Receiving bank which is receiving the funds for and on behalf of the beneficiary

©2022 Temenos Headquarters SA - all rights reserved.

Payment Order » Outgoing MT103 Swift Message » System Captured fields

The following fields can be seen in payment order enquiry after authorization. Charges are for whose account Three option are available. OUR/BEN/SHA are the following options OUR : Charges are collected from the applicant BEN : Charges are deducted from the beneficiary SHA: Charges are shared by the sending bank and the receiving bank. Sender will bear the sending bank charges and beneficiary will bear the beneficiary bank charges. Status : It specify the status of the transaction When a user creates an outgoing payment SWIFT message the completed status is defined as 999 – Payment complete

Payment Order » Outgoing MT103 Swift Message » System Captured fields

- Charge Option
 - OUR/BEN/SHA (By default system capture the charges as SHA)
- Output Channel
 - This field is used to identify which channel is used for processing the transaction (Eg: Nostro, Vostro etc.,)
- Credit account
 - Nostro account or Vostro account is reflected as a credit account
- Status
 - It specify the status of the transaction When a user creates an outgoing payment SWIFT message the completed status is defined as 999 – Payment complete

Payment Order » Outgoing MT103 Swift Message » System Captured fields

Balance Reservation Number: As soon as the transaction are authorised system creates an account locked events based on an application called AC.LOCKED.EVENTS. System reserve the balance for the transaction and lock the amount of the transaction. **Transaction Reference Number(TPH Reference):** A unique number to identify the payment throughout its processing. This reference is used for all the enquiries.No input Field and the reference number is a system generated id

Payment Order » Outgoing MT103 Swift Message » System Captured fields

- **Balance Reservation Number**
 - As soon as the transaction are authorised, system creates an account locked events using an application called AC.LOCKED.EVENTS
 - System Reserve the balance for the transaction and lock the amount of the transaction
- **Transaction Reference Number(TPH Reference)**
 - A unique number to identify the payment throughout its processing
 - This reference is used for all the enquiries
 - No input Field and the reference number is a system generated id

Payment Order » International Transfer Outward Remittances » MT202 Financial Institution Transfer

An MT202 is a standardized SWIFT payment message used to instruct the transfer of funds between financial institutions. This may be in the different currencies and with different banks. For example; If Citibank, London wants to transfer USD5000 to Bank of America, US – This can be instructed using an MT202 swift message.

Payment Order » International Transfer Outward Remittances » MT202 Financial Institution Transfer

- From time-to-time banks have to move their funds around.
- Payments hub can be used for movement of funds between banks
- A simple way to look at this is given in the illustration below.

An MT202 is a standardized SWIFT payment message used to instruct the transfer of funds between financial institutions. For example; If Citibank, London wants to transfer USD5000 to Bank of America, US – This can be instructed using an MT202 swift message

Payment Hub » Incoming Transfer

Inward remittances can be handled in the payment's hub module. The System is integrated with SWIFT messages. Hence, whenever a swift message is received for inward remittances, the payments hub Module will automatically create a transaction to capture the details. Details would include information like the currency, the amount, the credit account, the debit account and the value dates. A transaction is captured by the system and kept on hold for user intervention and authorisation. It can also be set up for 'Straight Through Processing' for the automatic execution of the transaction. It is also possible to manually input the transaction for inward remittances.

| Payment Hub » Incoming Transfer

- Funds will be received favoring our customers from another banks via SWIFT/interfaces
- Our Customers receive funds from abroad to their account. Beneficiary is our Temenos Transact customer
- Banks Nostro/Vostro accounts is used to facilitate these types of payments

©2022 Temenos Headquarters SA - all rights reserved.

 **TEMENOS**
Learning Community

Payment Hub » Incoming Transfer » Cross Currency

The treasury rate will be defaulted from the exchange rate of the currency. A customer specific spread can be input if needed. CUSTOMER.RATE refers to the final exchange rate applied to this transaction. This rate will be calculated by adding the customer spread to the Treasury Rate. If the Customer rate is entered, then the Customer spread will be calculated and defaulted with the difference between Treasury rate and the Customer Rate. When the treasury rate and customer spread details are null, then the customer rate can be input by the user.

| Payment Hub » Incoming Transfer » Cross Currency

- Possible to transfer to accounts of different currencies

E.g. From

- The additional fields used

Field Name	Details
Treasury Rate	Exchange rate defaulted from Currency table
Customer Spread	Customer specific spread on the rate
Customer Rate	Final rate for the customer.

Payment Hub » PP.ORDER.ENTRY

PP.ORDER.ENTRY application is used to capture all types of manual transaction for customer and also for banks. Using this application, the following requests can be captured for customers and for banks. Incoming Transfer - Receiving of funds favoring our bank's customer Redirect Transfer - Both Ordering customer and Beneficiary is not holding an account with us and our bank acts as intermediary for this transfer

| Payment Hub » PP.ORDER.ENTRY

PP.ORDER.ENTRY application is used to capture manual transactions

Using this application, the following requests can be captured for customers and for banks

- Incoming Transfer
 - Receiving of funds favoring our bank's customer
- Redirect Transfer
 - Both Ordering customer and Beneficiary is not holding an account with us and our bank acts as intermediary for this transfer

Practice 2 » How to Capture Outgoing MT103 SWIFT Message using Payment Order

In this practice, we will initiate a Outgoing swift message (MT103) with the details as above.

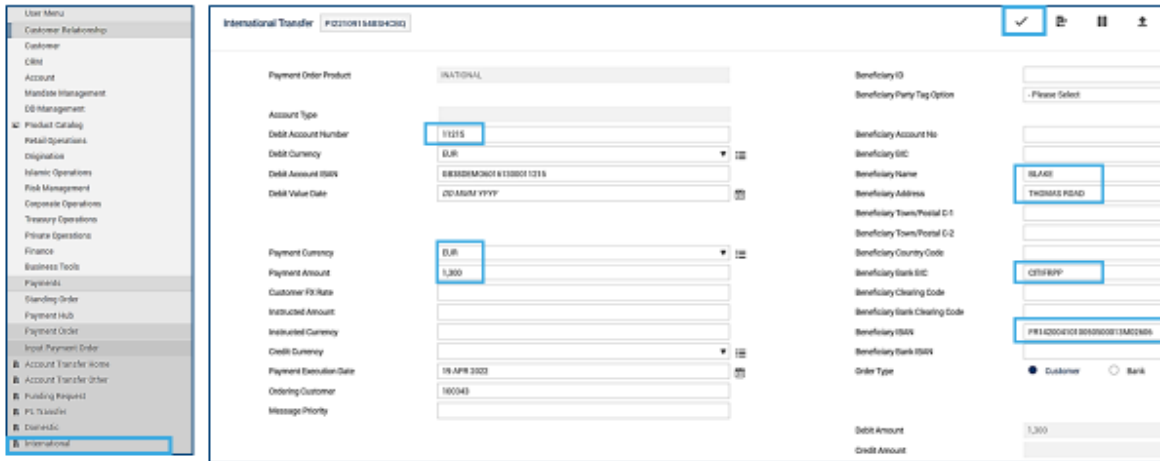

Practice 2 » How to Capture Outgoing MT103 SWIFT Message using Payment Order

- User Menu > Payments>Payment Order >Input Payment Order> International
 - Debit Account 11215
 - Payment Currency EUR
 - Payment Amount 1300
 - Input any Beneficiary Account number as **FR1420041010050500013M02606**
 - Input Beneficiary name and address
 - Input CITIFRPP as Beneficiary Bank BIC
 - Validate and commit the record
 - Authorise the record and enquire the status of the payment
 - View the outgoing swift message
 - **The transaction reference number will be referenced for all enquiries**

Practice 2 » How to Capture Outgoing MT103 SWIFT Message using Payment Order

Using the Menu option User Menu >Payment >Payment Order >Input Payment Order >International we can capture an Outgoing MT103 SWIFT message. Input the debit account number, payment currency, payment amount, beneficiary details, beneficiary bank BIC code. If the beneficiary account is in Europe region then Beneficiary IBAN is mandatory. Validate and then commit the record.

Practice 2 » How to Capture Outgoing MT103 SWIFT Message using Payment Order

The screenshot displays the 'International Transfer' form in the TEMENOS system. The left sidebar shows the navigation menu with 'International' selected. The main form is divided into two columns. The left column contains fields for 'Payment Order Product' (INTERNATIONAL), 'Account Type', 'Debit Account Number' (11215), 'Debit Currency' (EUR), 'Debit Account IBAN' (BE33836126161000112115), 'Debit Value Date' (20230401), 'Payment Currency' (EUR), 'Payment Amount' (1,300), 'Customer FX Rate', 'Instructed Amount', 'Instructed Currency', 'Credit Currency', 'Payment Execution Date' (19 APR 2023), 'Ordering Customer' (100043), and 'Message Priority'. The right column contains fields for 'Beneficiary ID', 'Beneficiary Party Tag Option' (Please Select), 'Beneficiary Account No', 'Beneficiary BIC' (BLA033), 'Beneficiary Name' (THOMAS ROAD), 'Beneficiary Address', 'Beneficiary Town/Postal C-1', 'Beneficiary Town/Postal C-2', 'Beneficiary Country Code' (CZ01 BPP), 'Beneficiary Bank BIC' (CZ01 BPP), 'Beneficiary Clearing Code', 'Beneficiary Bank Clearing Code' (P8142004101 0000000110000000), 'Beneficiary IBAN', 'Beneficiary Bank IBAN', 'Order Type' (Customer), 'Debit Amount' (1,300), and 'Credit Amount'.
